CC Docket No. 94-102

**UNITED STATES CELLULAR CORPORATION  
QUARTERLY E911 IMPLEMENTATION REPORT**

United States Cellular Corporation ("USCC"), by its undersigned attorneys, hereby submits its fourth quarterly E911 implementation report pursuant to the Commission's order staying certain E911 phase II deadlines for many non-nationwide wireless carriers. As required by the Commission's recent public notice, USCC has submitted its E911 information in the spreadsheet designed by the Wireless Telecommunications Bureau to make the required E911 reports more uniform and informative.<sup>1</sup>

**I. Introduction**

USCC is a so-called Tier II carrier under the *Order to Stay* issued by the Commission last year.<sup>2</sup> As a wireless carrier with systems in many rural markets, USCC faces particular challenges in upgrading its technology and interacting with a wide variety of PSAPs

<sup>1</sup> See Public Notice, "Wireless Telecommunications Bureau Standardizes Carrier Report on Wireless E911 Implementation," DA 03-1292, release June 6, 2003.

<sup>2</sup> See *Revision of the Commission's Rules to Ensure Compatibility with Enhanced 911 Emergency Calling Systems, Phase II Compliance Deadlines for Non-Nationwide CMRS Carriers, Order to Stay*, 17 FCC Rcd 14841 (2002) ("*Order to Stay*").

across its service area. To meet these challenges, USCC continues to increase both the financial and personnel resources devoted to the deployment of E911 services throughout its service area. This continued commitment produced several new E911 deployment milestones in the most recent quarter, including reducing the number of backlogged phase I requests capable of deployment to three, increasing USCC's overall phase I roll-out percentage to 92 and increasing its effective phase I roll-out percentage -- *i.e.* in markets where there are no PSAP, LEC or other obstacles to deployment -- to 99 percent.

## **II. Status of Phase I Requests**

USCC and its E911 vendor, TeleCommunication Systems, Inc. ("TCS"), actively work with all requesting PSAPs to deploy phase I E911 service throughout USCC's service area. In some cases, USCC has proceeded with deployment despite the fact that a particular PSAP's request does not amount to a valid request for service under the Commission's rules, including numerous markets where the PSAP made only an oral request.

To date, USCC has received 651 requests for phase I service and successfully deployed phase I service to 599 PSAPs. This represents full phase I deployment to approximately 92 percent of the PSAPs that have requested the service. The spreadsheet attached hereto as Appendix B identifies those PSAPs requesting phase I service and the markets where USCC has deployed phase I.

USCC currently has 52 pending phase I requests. Of these pending phase I requests, 26 have been pending less than six months. USCC, like other wireless carriers, has encountered various delays in the phase I roll-out due to circumstances beyond its control including ongoing LEC-related delays and ALI database and connectivity problems. Of the

remaining 26 phase I requests pending for more than 6 months, 23 have been delayed by factors outside of USCC's control. Nine are in markets where the PSAP has failed to order the equipment necessary to utilize phase I data,<sup>3</sup> six are in markets where the PSAPs have delayed the review and approval of the maps or traffic plans that must be in place before phase I deployment can proceed and eight more are in markets where phase I deployment has progressed, often to drive testing, only to identify a connectivity problem between the LEC and the PSAP.

This means that of the phase I requests that could be deployed by USCC, all but 3 (99 percent) were actually been deployed.<sup>4</sup> USCC and TCS will continue their efforts to overcome these obstacles and work toward full phase I deployment for all requesting jurisdictions.

## **II. Status of Phase II Requests**

USCC has continued the deployment of phase II E911 service in compliance with the Commission's *Order to Stay*. To date, USCC has successfully deployed phase II E911 service to 63 PSAPs in its CDMA service area. USCC currently has 153 outstanding PSAP requests for phase II service. Of these, 22 have been pending less than six months. The attached spreadsheet identifies those PSAPs requesting phase II service and those markets where USCC has deployed it.

---

<sup>3</sup> Although these requests are technically invalid, USCC will remain in contact with these PSAPs and proceed to deployment as soon as the necessary equipment has been ordered.

<sup>4</sup> The three outstanding phase I requests were discovered by USCC as it prepared the attached spreadsheet for E911. In the course of matching its PSAP list with the PSAP registry, USCC identified three new phase I requests.

USCC has 68 phase II requests pending more than six months. Of these 68 outstanding phase II requests, 45 (66 percent) are in markets where USCC is prepared to deploy phase II *as soon as the PSAPs are ready to receive the phase II information*. In many of these markets, USCC and its vendors have completed all the necessary steps toward phase II deployment and are waiting for the PSAPs to upgrade their systems.

Of the 23 remaining phase II requests pending for more than six months, 19 are in USCC's TDMA markets. USCC is currently in the second year of a three-year conversion of its TDMA markets to 1XRTT CDMA technology.<sup>5</sup> A significant benefit from this conversion, which involves a complicated, multiple step process to clear sufficient spectrum in order to overlay a CDMA system in each market, is that a handset-based phase II solution will be available in these markets. The overbuild process continues to be well ahead of the schedule originally presented to the Commission.<sup>6</sup>

Six of the 19 TDMA phase II requests are in various Texas markets where the CDMA overbuild was completed in early July 2003. USCC is in the process of deploying phase II in these markets and expects to roll it out no later than the end of August. Four of the 19 TDMA phase II requests are in Missouri markets scheduled for the CDMA overbuild in August

---

<sup>5</sup> As a carrier serving a number of RSAs, USCC consistently selected the digital air interface used by carriers serving nearby major metropolitan areas in order to maximize roaming capabilities. As a result, USCC currently has a mixed digital air interface of both CDMA and TDMA systems in its network. In order to keep its service competitive over the long term, USCC announced in late 2001 that it would convert its TDMA markets to CDMA 1XRTT technology over a three year period. See United States Cellular Corporation's Supplement to Petition for Waiver of Sections 20.18(e) and (g) of the Commission's Rules, CC Docket 94-102 (filed November 30, 2001) ("*USCC Supplement*").

<sup>6</sup> USCC completed the CDMA overbuild between six months to one full year ahead of schedule in its Wisconsin and northern Illinois markets, as well as several markets in Iowa. In addition, USCC has accelerated the CDMA overbuild in its northeastern markets by one year and stepped up the scheduled overbuild between three and five months in its southwestern markets.

2003, seven are in Vermont which is scheduled for a CDMA overbuild in October 2003 and two are in markets scheduled for a CDMA overbuild in the third quarter of 2004. USCC has notified the requesting PSAPs in these markets of its planned CDMA conversion timeline and has agreed to provide updates on its progress as necessary.

Although this schedule exceeds the six month deployment time frame provided in the Commission's rules, USCC submits that its ambitious, time-consuming and costly network overbuild provides the fastest path to full phase II compliance in USCC's rural TDMA markets. As noted in recent filings by other Tier II and Tier III carriers in smaller, rural TDMA markets, there are significant limitations on the accuracy of network solutions absent the time-consuming and expensive process of constructing location-only sites and/or securing necessary landlord and zoning approvals to install so-called AOA antennas.<sup>7</sup>

In its CDMA jurisdictions where phase II requests have been received, USCC has installed the necessary software loads on its switches to provide phase II service and upgraded all the trunking between these switches and the Mobile Positioning Center of its E911 vendor, TCS. USCC and TCS also have successfully integrated the CDMA switches serving these markets with the TCS equipment and the phase II software. USCC is in the final stages of testing a new a permanent SS7 connection between its network and TCS – a connection that will significantly reduce the time needed to deploy phase II in response to future PSAP requests. USCC is continually updating the Base Station Almanac (BSA) used to improve and verify the accuracy of location information provided to PSAPs. The BSA continues to be populated with detailed

---

<sup>7</sup> See, e.g., Tier III Coalition Petition for Forbearance, WT Docket No. 02-377, at 12 (affirming the inability of Tier III carriers to find a network-based solution without the need for additional location-only cell sites); *Ex Parte* Notice of Rural Cellular Corporation, December 19, 2002 (describing the difficulties in installing and utilizing AOA antennas at its cell sites).

logistical information for all the cell sites serving USCC's CDMA markets with phase II requests.

USCC has contracted with Marconi Corporation to do the necessary calibration, accuracy and drive testing to ensure that USCC's phase II service meets the Commission's accuracy requirements. To date, Marconi has conducted testing on USCC's CDMA switches that are serving PSAPs with live phase II deployments. These tests have been conducted using CDMA location-capable phones currently available to USCC's customers. Marconi's accuracy test results confirm that USCC is meeting the FCC's handset requirement that 67 percent of the calls are accurate to within 50 meters and 95 percent of the calls are accurate to within 150 meters.

### **III. Status of Handset Deployment**

USCC is in compliance with the applicable handset deployment benchmarks. USCC began selling GPS-enabled handsets by March 1, 2003 and 25 percent of USCC's new handset activations by the end of May 2003 were E-911 capable phones. In fact, USCC's recent sales even exceeded the FCC's penetration benchmarks. Nearly 53 percent of USCC's activations in June 2003 were GPS-enabled phones – the penetration level required by the Commission by the end of November 2003.<sup>8</sup>

Currently, USCC has eight GPS-enabled handsets available for sale in its CDMA markets: the Motorola v120e, Audiovox CDM8500, Audiovox 9500, SonyEricsson T206, Kyocera 7135, Nokia 3585i, Nokia 3586i and the Kyocera 3225. One additional GPS-enabled phone – the LG VX4400 – has been approved for use on USCC's network and will be available

---

<sup>8</sup> See *Order to Stay* ¶ 27.

to dealers and customers in late July, 2003. An additional five GPS-enabled phones are in the testing process: Audiovox 8400, Audiovox 8600, Motorola T73I, Kyocera Kx414e and the Kyocera Slider. If no issues arise during testing, it is anticipated that these phones will be commercially available for USCC's dealers and customers during the months of August and September 2003.

USCC anticipates that handset sales will increase, both in raw numbers and as a percentage of USCC's total handset sales because as of July 1, 2003, USCC is only offering GPS-enabled phones for sale in its CDMA markets. USCC will continue to track its sales of GPS-enabled phones in order to ensure compliance with the penetration benchmarks in the Commission's *Order to Stay*.

#### IV. Conclusion

As demonstrated above, USCC has continued making significant progress in deploying E911 phase I and phase II service throughout its service area. The commitment of significant financial and personnel resources has enabled USCC to move closer to its goal of meeting or exceeding the Commission's implementation deadlines for E911 deployment.

Respectfully submitted,

UNITED STATES CELLULAR  
CORPORATION
